

# P U M P   B A R G E

Located high in the mountains of Peru ( 14,000 feet elevation) the Antamina Copper Mine Project was a major undertaking for the Bechtel Mining Group. Bechtel turned to CAID Industries for the design, fabrication, transportation and commissioning of two Reclaim Water Pump Barges. Each barge supports five 300HP pumps, carries a 33' tall bridge crane, has a 30' x 40' deck, and weighs 200,000 lbs.

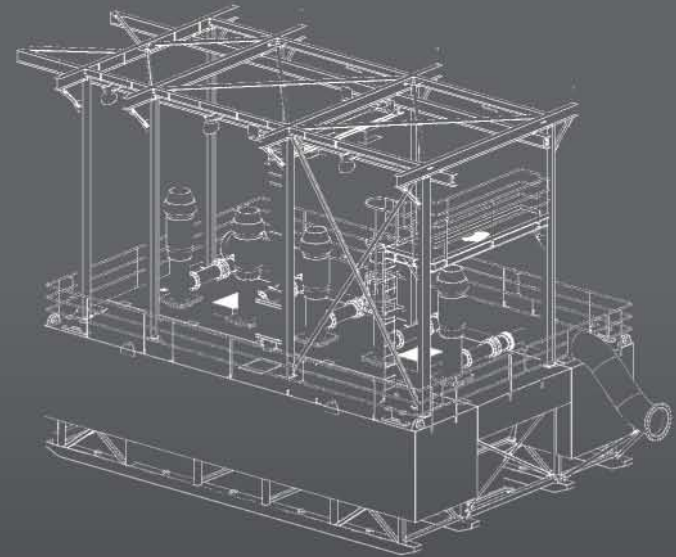

# PUMP BARGE

Construction schedules required fast-track design development as the barges were being fabricated, resulting in Bechtel achieving their early completion target dates.

## Technical Statistics:

*Size: 30' x 40' with a 33' tall crane | Weight: 200,000 pounds | supports 5 300HP pumps*
